National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, *How to Complete the National Register of Historic Places Registration Form*. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. **Place additional certification comments, entries, and narrative items on continuation sheets if needed (NPS Form 10-900a).**

1. Name of Property

Historic name Norden Bombsight Storage Vaults

Other names/site number KHRI #009-97

Name of related Multiple Property Listing World War II-Era Aviation-Related Facilities of Kansas

2. Location

Street & number 9047 6th Street

Narrative Description

(Describe the historic and current physical appearance and condition of the property. Describe contributing and noncontributing resources, if applicable. Begin with a **summary paragraph** that briefly describes the general characteristics of the property, such as its location, type, style, method of construction, setting, size, and significant features. Indicate whether the property has historic integrity.)

Summary

The Great Bend Army Air Field (AAF) Norden Bombsight Storage Vaults, built in 1943, are utilitarian concrete structures designed by the Army Corps of Engineers for the storage and issue of the Norden Bombsights during World War II. The buildings are located at the Great Bend Municipal Airport, 9047 6th Street, five miles west of Great Bend, Kansas in Section 3, Township 20, Range 14 West. The buildings are nominated to the National Register of Historic Places under the Multiple Property Documentation Form (MPDF), *World War II-Era Aviation-Related Facilities of Kansas*. The buildings are eligible for nomination under Criterion A in the area of Military, falling within the MPDF subtype of *Storage Building*, significant as an extant structure built for the World War II Air Field.

Elaboration

Architectural Description

The Great Bend AAF Norden Bombsight vaults consist of two one-story buildings placed in an L-shaped configuration and surrounded by a concrete pad. The buildings are constructed of poured concrete approximately eight inches thick. They have poured concrete roofs.

The Bombsight vaults are located in the central portion of the Great Bend Municipal Airport, just east of the runways (Figure 1.) The vaults coordinates are 38.346536 latitude and -98.852856 longitude. The former Army air field includes two World War II hangars¹, six brick chimneys from previous hangars and the two concrete Norden bombsight storage bunkers, as well as several modern buildings

The smaller north building is oriented to the north with two north doorways. The building has a sloped roof and sits on a raised concrete foundation. The building has an east-west measurement of 16 feet, a north-south measurement of 13 feet and a height of approximately ten feet. The building is L-shaped, with a six-foot square cut out of its southwest corner.

The north building's north façade has two metal doors that swing outward set in metal frames. The metal frames are surrounded by wood. Each thick metal door has a handle that connects to an interior locking mechanism, now disabled. Two concrete steps lead to each doorway, which is topped with a concrete lintel and a metal grate. The east and west elevations consist of concrete walls. The south elevation has two metal grates near the roof with concrete sills. The building has two interior rooms. The east room is approximately five feet square. The west room is approximately 12 feet deep and 10 feet wide, with a lowered fiberboard ceiling.

The larger south building² is oriented to the east, sits on a raised concrete pad and has a flat roof. The building measures approximately ten feet deep and 40 feet long. The east façade has five doorways rimmed in metal, but only bay two retains its metal door. The east façade once had five upper and five lower square openings. The five upper openings and two of the lower openings are now filled with concrete. The north, south and west elevations are concrete walls. The five interior rooms are approximately seven-and-a-half feet wide and nine feet deep.

¹ The airport's remaining B-29 hangar is scheduled for demolition in 2015.

² A post-war shed, now removed, once fronted this building.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

- A Owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years old or achieving significance within the past 50 years.

Narrative Statement of Significance

(Provide a summary paragraph that includes level of significance, applicable criteria, justification for the period of significance, and any applicable criteria considerations.)

Summary

The Great Bend Army Air Field Norden Bombsight Storage Vaults, 9047 6th Street in Great Bend, Barton County, Kansas are nominated to the National Register of Historic Places under Criterion A, significant at the local level in the area of Military as part of the MPDF, "World War II-Era Aviation-Related Resources of Kansas". The buildings fall within the MPDF subtype, *Storage Building*, significant as an extant structure built for the World War II Air Field. The buildings were designed by the Army Corps of Engineers for the storage and issue of Norden Bombsights. The vaults were constructed in 1943 as part of a national defense strategy that placed air fields in south central and southwest Kansas.

The impetus for this nomination came out of Section 106 mediation resulting from the proposed demolition of a National Register-eligible B-29 hangar at the Great Bend Army Air Field. The city's proposal to demolish the hangar required a permit from the Federal Aviation Administration. The city of Great Bend, the owner of the property, agreed to nomination this hangar and the Norden Bombsight Storage Vaults to mitigate for the loss of the B-29 hangar.

Elaboration

On September 30, 1942, the Great Bend Chamber of Commerce received a message from Senator Arthur Capper: "Civil Aeronautics Administration has just allocated 1 million dollars for construction of air field at Great Bend."³ This was the first official information that an air base would be built at Great Bend, although government representatives had already been exploring the area for several weeks. The chosen site was five miles west of the town in four sections in Buffalo and Liberty townships.

The Great Bend base was originally activated to serve as a satellite base to the Smoky Hill Army Air Field in Salina, so early planned construction was limited.⁴ Essentials were completed first, with the first runway concrete poured in December 1942.⁵ Base construction proceeded quickly with non-essential wartime materials. The Army Corps of Engineers (Corps) oversaw all military construction during World War II. The Corps was a technical branch of the Army that specialized in construction and maintained a large and efficient field organization.⁶ The Great Bend Army Air Field reflected decisions made by the Corps to conserve materials in every way possible. Non-critical materials—wood, concrete, tarpaper—were substituted for critical materials whenever possible. Construction was limited to bare necessities.

The mission of the Air Field changed in February 1943. An expansion of the field's infrastructure was announced to prepare the base for a new assignment—training personnel for the new B-29 Very Heavy Bomber.⁷ Approximately 145 new buildings were constructed that included barracks, administration buildings,

a hospital and new, larger hangars designed especially for the B-29 Superfortress.⁸ The sturdy Norden Bombsight vaults were likely built during this 1943 airfield expansion by the Patti-McDonald Construction Company, the Kansas City firm awarded the contract for most of the buildings at the air field.⁹ The building is labeled as "Bombsight Storage" in a 1945 station layout plan.

Norden Bombsights were developed in the 1920s by American engineer Carl L. Norden for the US Navy. The Bombsight was vital in conducting high-altitude strategic bombing. It served a crucial role in defining air war strategy during World War II. Charles Bright describes the devices in the *Historical Dictionary of the U.S. Air Force*:

Precision bombing required meticulous control; to accomplish this, the Norden incorporated a gyro-stabilized automatic pilot. The mechanism was modified in 1941 by the Minneapolis Honeywell Company and designated the Army C-1 autopilot. This modification enabled a bomber to be flown on a straight, level course, giving the bombardier a steady platform on which to operate the bombsight during the bombing run. Also known as the "Blue Ox" the Norden could quickly calculate and correct directional changes due to wind drift. Flying at a preset altitude, it could rapidly compute the correct bomb release angle for a constant speed of closure to the aiming point. Under optimal conditions on an undisturbed run, the accuracy of the device was excellent. However, any last second changes in the altitude of the bomber, such as those encountered during battle, could markedly influence the accuracy of the sight.¹⁰

The Bombsight storage buildings built at the Great Bend AAF were labeled second-generation Norden vaults. Early Bombsights were stored in concrete vaults within wood buildings. The second-generation vaults were built at bases around 1943 as the devices were reclassified from secret to restricted. The military realized that strategic bombing would play an important role during World War II and that the Norden Bombsight would be crucial in that goal. The second-generation vaults, such as those built at the Great Bend AAF, were more secure, placed within an open area and used only for storage. The structures helped ensure the secrecy of this advanced technology.¹¹

During 1944 and 1945, the primary mission of the Great Bend Air Field was to serve as a combat training base under the B-29 Superfortress project, preparing the B-29 aircraft and their crews for the Pacific front.¹² The base served as a staging area, where air crews would practice flying the massive airships and maintenance crews would learn the mechanics of the airplanes. Great Bend also became one of the first redeployment installations in the country. During early 1945, European theater echelons were trained in B-29 maintenance before departing for the Pacific.¹³

Activity at the Great Bend AAF decreased dramatically during mid-1945. No new trainees were assigned to the base. During the summer of 1945, the base's primary mission was to discharge or transfer qualified soldiers. The base was officially placed on standby on December 31, 1945 and buildings were inactivated.¹⁴ The field

was declared surplus in June 1946 and the city of Great Bend was granted a permit to acquire it.¹⁵ The air field was deeded to Great Bend via three Quitclaim Deeds in December 1947, October 1948 and June 1949.¹⁶ The former Bombsight vaults have served as storage but are currently vacant.

The Great Bend AAF Norden Bombsight storage vaults were an integral component of World War II airfield construction in Kansas. A 2008 survey of World War II Airbases identified five extant sets of Norden Bombsight Storage Vaults in Kansas at Great Bend, Walker, Dodge City, Herington and Pratt air bases. The Pratt structures were listed in the National Register in 2012. Another set at McCook Army Air Base in Nebraska is also listed in the National Register. The Great Bend structures housed the most secretive and advanced technology of the period. They retain integrity of design, feeling and association. They are significant as important reminders of Kansas' contribution to World War II.

Verbal Boundary Description (describe the boundaries of the property)

The nominated property is located in the NW ¼ of the NE ¼ of Section 3, Township 20S, Range 14W, near the southwest corner of C and 6th streets at the former Great Bend Army Air Field. The nomination boundary is defined by the concrete pad that holds the storage vaults.

Boundary Justification (explain why the boundaries were selected)

The nominated property includes only the concrete vaults and their pad as defined by the latitude and longitude coordinates. This nomination does not include any authority property beyond the hangar
