The George Hanson Barn was nominated to the National Register of Historic Places as part of the “Byre & Bluff Barns of Doniphan County” multiple property nomination on May 7, 1987.

At that time, an estimated construction date of 1885 was provided in the nomination. New information has become available that documents the barn’s date of construction as 1900. This additional information is submitted to clarify the date of construction and period of significance.

The revised date of construction – 1900 – is documented by a daily journal penned by George Hanson’s eldest daughter Annetta Celia Hanson (born April 9, 1883, died June 27, 1971). She began this journal August 21, 1900. Since her mother’s death on November 30, 1899, she had been in charge of the household and her five younger siblings. The 1900 federal census confirms the names and ages of the Hanson family members.

Transcribed excerpts from Annetta’s journal are attached with photocopies of the difficult-to-read original pages. According to her notes, construction on the barn began in late August 1900, and many area men apparently helped with the project. Family recollections suggest that a Mr. Howland from nearby Severance was the builder, but this is not recorded in Annetta’s journal. Indeed, the 1900 federal census records a Joseph Howland, a carpenter, living in Severance. A 1905 county history also confirms that Joseph Howland built many area buildings.

Period of Significance
The original nomination defined the period of significance as the estimated construction date (c. 1885). This is being revised to 1900. Additionally, this revised date of construction falls within the period of significance (c. 1860-1933) defined by the “Byre & Bluff Barns of Doniphan County” multiple property nomination.

Describe the present and original (if known) physical appearance

The George Hanson Barn (ca. 1885) is located on the Alice Hanson Farm near Leona, Kansas (pop.73). The one-story, three-bay, gable entrance, board and batten barn has a full byre with a limestone foundation and a wooden shingled roof. Its superstructure is supported by mortised and tenoned, post and beam construction. The barn has a north to south orientation, measuring forty feet from north to south and twenty-eight feet from east to west. The byre is built into the northern embankment.

The north gable end is comprised of a small hinged door on the west side of the ground level, two hinged shutters stand on the east side. A double leaf, hinged hay door with a hood stands in the gable peak. Three rectangular openings, now filled with cinder blocks, stand in the foundation. Two rectangular louvered vents pierce the board and batten wall of the western elevation. Rectangular openings, now filled with cinder blocks, stand in the western elevation's foundation wall. Filled openings stand in the eastern elevation's foundation, the wooden wall has no openings. A small hinged door stands in the center of the hay floor level of the southern elevation. A circular louvered vent with a five-sided star inside of it pierces the center of the southern elevation's peak. A large door space accesses the byre on the southern elevation's western side, two hinged shutters also access the byre level. The barn retains its stall and storage space arrangement. The barn is painted white.

Originally constructed as a draft animal barn, the barn is now used for hay storage. The barn maintains a high degree of architectural and structural integrity.

Builder/Architect Unknown

Statement of Significance (in one paragraph)

The George Hanson Barn (ca. 1885) is being nominated to the National Register as part of the Byre and Bluff Barns of Doniphan County (ca. 1850–1933) nomination under criterion C for its architectural significance. Constructed for George Hanson, the barn is an example of a three-bay, gable entrance, full byre, board and batten barn with a gable roof and limestone foundation. The Hanson family retains ownership of the barn.

The eighteen nominated barns share a common feature in that at least one side of each barn’s foundation is embedded in an earthen bank or bluff; the majority of the barns are built into shallow banks, two of the barns are built into bluffs. These vernacular wooden and cement structures span a seventy year construction period and exhibit various masonry foundations, skeletal structures, and superstructures. The byre and bluff barns of Doniphan County are an excellent example of a vernacular form of architecture which was built to take advantage of the hilly topography of the county. These barns are representative of approximately thirty byre and bluff barns identified in a 1984–1985 cultural resource survey of Doniphan County. The remaining barns are too altered and/or deteriorated to be included in this nomination. Most of the nominated barns were constructed for stock and dairy cattle and remain in active use on working farms. The relative rarity of byre and bluff barns in Doniphan County and the high degree of architectural and structural integrity maintained by the nominated barns make this thematic grouping of vernacular agricultural structures extremely significant.

Doniphan County (est. 1855) experienced a substantial population increase in the twenty years following the Civil War, with many settlers moving from Ohio, Pennsylvania, Virginia, and Germany. The barn building traditions brought by these settlers combined with the suitable topography contributed to the building of the byre and bluff barn type in Doniphan County. Most of the nominated barns are three-bay, center entrance, gable roof structures with limestone foundations, a full byre, a threshing floor, and a hay loft. There are groupings of period types, such as the board and batten barns with louvered vents from the 1870s and 1880s, the large, gambrel roof barns from 1910s, 1920s and 1930s, and the gradual transition from post and beam construction to plank framing.

In 1891 J. D. Walters of the Kansas State Agricultural College called the byre (bank)/bluff barn an "all-purpose barn of the Kansas farmer" in an article entitled "The Barn," which was published in the Quarterly Report of the Kansas State Board of Agriculture. Walters described the bank barn as follows:

It gives a warm basement for the milk cows and cattle, and an accessible second story for the draught animals—for tools, machines, harness, and grain—and a roomy attic, or loft, for hay, straw, and fodder. In many states this form is objectionable for sanitary reasons, but in the dry climate of Kansas it is preferable to any other, unless there should be an unusually moist ledge directly against or under it...The building should be located so that the basement will be partly in the ground on the north and west, and so that a low embankment, or filling, on these sides will give
access to the second story.

While the byre or bluff barn presented a practical solution for Doniphan County's rolling topography, harsh winters, and high winds, it was not the most common solution. The byre and bluff barns built between 1860 and 1933 generally cost from $2,000.00 to $3,000.00 and while this may have been cost effective investment, it was an expensive investment. In addition, the higher degree of skilled craftsmanship required to construct a byre or bluff barn as opposed to most barns without foundations also hindered their construction. While the byre and bluff barns of Doniphan County are a sturdy survivor of a barn type built in Doniphan County between 1860 and 1933 they are not prolific, being far outnumbered by more inexpensive, rectangular wooden barns without foundations.
