**National Register of Historic Places**  
**Registration Form**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form (National Register Bulletin 18A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-9000a). Use a typewriter, word processor, or computer, to complete all items.

### 3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property meets does not meet the National Register criteria. I recommend that this property be considered significant nationally statewide locally. (See continuation sheet for additional comments.)

LATE VICTORIAN/Queen Anne

Foundation: STONE
Walls: WOOD
Roof: ASPHALT
Other: CONCRETE

Narrative Description
(Describe the historic and current condition of the property on one or more continuation sheets.)
8. Statement of Significance

Applicable National Register Criteria
(Mark "X" in one or more boxes for the criteria qualifying the property for National Register)

☐ A Property is associated with events that have made a significant contribution to the broad patterns of our history.

☐ B Property is associated with the lives of persons significant in our past.

☒ C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.

☐ D Property has yielded, or likely to yield, information important in prehistory or history.

Criteria Considerations
(Mark "X" in all the boxes that apply.)

Property is:

☐ A owned by a religious institution or used for religious purposes.

☐ B removed from its original location.

☐ C a birthplace or grave.

☐ D a cemetery.

☐ E a reconstructed building, object, or structure.

☐ F a commemorative property.

☐ G less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance
(Enter categories from instructions)

State  Kansas
Zip code  66441-3530

Paperwork Reduction Act Statement: This information is being collected for applications to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (18 U.S.C. 470 et seq.).

Estimated Burden Statement: Public reporting burden for this form is estimated to average 18.1 hours per response including time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding this burden estimate or any aspect of this form to the Chief, Administrative Services Division, National Park Service, P.O. Box 37127, Washington, DC 20013-7127; and the Office of Management and Budget, Paperwork Reduction Projects (1024-0018), Washington, DC 20503.
Overview
The George T. Brown house is a two-story Queen Anne dwelling built in 1895 at 222 S. Jefferson Street in Junction City, Kansas. The house is nominated to the National Register of Historic Places under Criterion C in the area of Architecture as a local example of the Queen Anne style. Much of the frame house’s ornamentation comes from its fluctuating wall surfaces and roof gables. Although the footprint is mostly rectangular, the house contains wall dormers, chamfered bays and lower hipped gables. The building’s 1895 construction date and classification in the Queen Anne style are supported by fairly restrained materials in the form of clapboard siding, exterior dentil molding, simple interior woodwork and fishscale shingles in the upper gables. Oriented to the east, the house sits on the northwest corner of West Walnut and South Jefferson Streets. It has an irregular hipped asphalt roof\(^1\) with cross-gable dormers, a stone foundation and original clapboard siding. Unless noted, all windows are original with one-over-one double-hung pane configurations.

East Façade
The façade of the Brown house is fronted by a full front porch that extends from the house’s hipped roof. The porch is supported by concrete Ionic columns on piers of molded concrete blocks placed atop limestone piers. A circular section of the porch on the northeast corner is covered by a conical roof and a simple finial. The porch’s balustrade is filled with turned spindles and the crawl space is covered with pieced boards. The floor of the porch is covered with carpet and the ceiling is clad with beadboards.

The house’s central entrance is surrounded by two large windows with leaded glass in the upper panes. A large gabled dormer projects from the second story of the façade. Windows in a squared Palladian motif fill the dormer, which is fronted by a short balustrade matching the porch balustrade.\(^2\) The gable’s molding returns at the outer edges and the upper portion is filled with fishscale shingles.

South Elevation
The south side of the house can be divided into three irregular bays. Moving from east to west (front to rear), the first bay includes the south side of the façade dormer and a chamfered bay set beneath a lower hipped gable. The side walls of the chamfered bay contain narrow windows but the south wall does not. A basement window is present under the south wall of the chamfered bay. The second bay has a gabled wall dormer in the second story containing a pair of windows and fishscale shingles in the upper portion. The first story of the second bay has two windows in the wall and one window in the basement level. A hipped gable projects west from the upper gable in the third bay, originally forming an ell. A small window is present in the second-story wall between these gables. A 1924 sunroom on a concrete foundation now fills most of the juncture on the southwest corner of the house, sitting below the main level of the house. The south wall of the sunroom has three new windows—a central double-hung surrounded by single-paned windows. The westernmost portion of the house’s south wall contains a single window in the first story.

---

\(^1\) The original roof was likely clad in wood shingles. This is based on the fact that George Brown owned a lumberyard.

\(^2\) Two non-historic statuettes are attached to the balustrade by a reversible method.
West Elevation
The rear of the house contains the 1924 sunroom in the southeast corner, containing two double-hung windows in the west wall. The central lower hipped gable contains the house’s kitchen and rear porch. The south half of the gable contains two windows in the wall and a coal door in the basement level. The porch in the house’s southwest corner was enclosed sometime after construction. The porch is clad in vertical beadboard with new louvered windows.

North Elevation
The north side of the Brown house can be divided into three irregular bays. Viewing from east to west (front to rear), the first bay contains the north side of the façade dormer in the second story and a small window in the first story. The second bay contains a chamfered bay topped with a gabled dormer. The chamfered bay has windows in all three sides, with leaded glass upper panes. The dormer has a pair of windows and fishscale shingles in the upper portion. A window is present in the basement level of this bay. The third bay contains a door to the basement and the enclosed rear porch. The porch has a modern door in the north portion topped with a metal awning surrounded by modern louvered windows. The remaining upper portion of the porch wall is filled with horizontal clapboards and the lower portion is filled with vertical beadboard.

Garage
The current owners built a two-car garage west of the house in 1996. The simple gable-end frame structure faces south toward Walnut Street. Two garage doors surround a single entrance door and two gabled dormers project from the roof. The building is not included in this nomination.

Interior
The interior of the Brown house retains a very high degree of integrity, including its original floor plan and most of the interior woodwork. All of the interior woodwork is stripped pine and the original floors are also pine. The first story has ceilings that are ten feet tall. The entry, library, living room and dining room on this story are in their original condition, with floor and window moldings, paneled doors and leaded glass windows in the library and living room that date to the house’s construction. Door lintels contain egg and dart molding. Five-panel pocket doors separate the living room from the entry. A sunroom, added around 1924, is located in the house’s southwest corner. The room has new windows and carpeting. A butler’s pantry leading from the dining room to the kitchen contains an original cabinet, but the kitchen has been remodeled, with new cabinets, floor, molding and wainscoting. The enclosed rear porch in the northwest corner of the house has also been remodeled to accommodate a small laundry and a bathroom.

A stairway leads from the house’s entry to the second story. The balustrade has turned spindles and simple newels with urn-shaped finials. The second story, with eight-foot ceilings, contains three bedrooms and one bathroom. The woodwork is stripped pine and the floors are carpeted. A central hallway leads to each of the rooms on this story. Each bedroom connects to a closet under the eaves of the house. All windows and doors have simple moldings with broad lintels and all doors have five panels.
Floor plans for the first (top) and second stories (bottom) of the George T. Brown house. Drawn by Susan Jezak Ford; not to scale.
The Brown house is in excellent condition. The current owner, Kenneth Shandy, purchased the house with his wife in 1995. The retired couple and their family stripped the woodwork, rewired electricity, remodeled the basement and kitchen, installed new plumbing and refinished all of the floors. The level of painstaking workmanship is very high, ensuring that the house remains in good condition for decades to come.

George T. Brown House
Geary County, Kansas

Overview
The George T. Brown house, located at 222 S. Jefferson Street in Junction City, Kansas, is nominated to the National Register of Historic Places under Criterion C in the area of Architecture as a local example of the late Queen Anne style. The house was built in 1895 for the owner of a local lumber yard. It reflects the turn of the century in ornamentation, but with a design solidly rooted in the Queen Anne style.

Architecture
The Brown house is an excellent transitional example of the Queen Anne style. Its very irregular roofline, asymmetrical appearance and clapboard or shingle walls are all significant elements of the style. The form is further supported by a characteristic interior with interconnected spaces and a prominent entry hall. The Queen Anne style is described by Virginia and Lee McAlester in *A Field Guide to American Houses* as the dominant building style from about 1880 until 1900. The authors describe the style as having a steeply pitched roof of irregular shape, a full or partial porch and textured shingles, all aspects found on the Brown house. The Brown house includes a hipped roof with lower cross gables and turned porch spindles, elements found on more than half of all Queen Anne houses.\(^3\) Its interior fits well with Leland Roth’s description of a Queen Anne house in *American Architecture: A History*. Roth describes a Queen Anne interior as having a free floor plan arranged around a reception hall that also serves as a stair hall. Main public rooms open to each other by means of broad sliding pocket doors. Interiors also typically contain an abundance of elaborate wood trim.\(^4\) The first story of the Brown house circulates freely and features pocket doors separating the entry from the living room. The house’s woodwork, probably originally painted, is plentiful and substantial. The front porch also features a corner tower, an element cited by both sources.

The Brown residence deviates somewhat from the earlier, heavily embellished examples of the Queen Anne style. Ornamentation inside and out is restrained, consistent with its construction date relatively late in the Queen Anne era. The house can be considered representative of the very end of the Queen Anne style, just before it segued into Colonial Revival around 1910. Exterior ornamentation is minimal and interior woodwork is either plain or includes some egg and dart molding. Leaded glass windows are present in two rooms, but these windows are rather subdued compared to those found in Queen Anne houses from previous decades. These design elements are representative of the time period when the Queen Anne style segued into Colonial Revival. The nation’s 1876 Centennial Celebration introduced pure examples of Colonial architecture and the movement gained momentum during the late 1800s. Colonial Revival became a leading architectural style in the 20th century.\(^5\) Its influence is seen on the Brown house in the simplification of Queen Anne flourishes, broken gable moldings and a façade that is nearly symmetrical.

---

5 McAlester, 239.
The Brown house was built of very traditional materials—a stone foundation, wood clapboards and wood shingles in the eaves. The front porch was likely originally supported by wood columns, as concrete was not a popular decorative material until the early 1900s. The porch’s concrete posts and columns probably replaced the original supports around 1910. Concrete gained popularity in this country as a decorative building material in the early 1900s and proliferated over the next two decades, taking on a variety of patterns. Thousands of rockfaced concrete block buildings were constructed between 1900 and 1930. The fluted Ionic columns fit in well with Queen Anne and Colonial Revival styles. They would have added a fresh, updated detail to the house when Ida Fitzgibbons inherited it from her father, David Hill in 1910. The columns, placed atop pillars of rockfaced blocks, would have been readily available during this era, making them old enough to have achieved historic significance.⁵

History of the House
The George T. Brown house sits on land that was awarded to Alva W. Hicks in 1860, in payment for his military service. The 80 acres known as Hick’s Hill was sold to William B. Clarke in 1885 and platted as W.B. Clarke’s First Addition to Junction City. Lots 16 through 20 of Block Three were purchased that year by Minnie and Hendrick Houghton, a local real estate agent and nurseryman. The couple purchased the lots for $850 and sold them to Charles and Fanny Stebbins in October 1887 for $1500. The Stebbins couple sold the lots to R.H. Hedges in December 1887 for $1375, who sold the property to George T. Brown for $1000 in June 1892. It is likely that these early sales reflect attempts at property speculation, as the lots never increased significantly in value and even declined at times.

George and Mary Brown took out a $700 mortgage on the property in November 1895 and probably built their home around that time. George Brown was a lumber dealer with a lumber yard at 425 N. Washington Street in Junction City. Sanborn Fire Insurance maps show that the yard, formerly The Badger Lumber Company, became the Brown & Moses Lumber Yard between 1892 and 1897. The yard, which also sold coal, became the George T. Brown Lumber Yard by 1905. By 1912, the yard had sold to become the Ziegler Lumber Company.

George and Mary Brown, both born in 1853, married in 1875. The 1900 Federal Census lists the couple with six children living in the house—Irene, 23, Edna, 21, Lena, 14, George T., Jr., 10, and twins Charles and Emily, 8. In 1904, the Browns sold the house to David Hill, moving to 303 N. Adams in Junction City.

David Hill purchased the house and accompanying lots for $4500. This significant increase in the value of the property supports the 1895 construction date. Captain David Hill was a Civil War veteran who had made a fortune in cattle in Colorado. He then invested in Geary County real estate in the 1880s. During his later years, Hill’s health and fortune declined, so he moved to 222 S. Jefferson with his wife, Amanda. He lived

⁵ Pamela H. Simpson, *Cheap Quick & Easy: Imitative Architectural Materials, 1870-1930* (Knoxville: The University of Tennessee Press, 1999), 11-27. No early photographs of the Brown house exist, so it is not known whether the balustrade was also replaced.
there until he died in 1910, despite the loss of the use of his legs.\(^7\) The Hill family owned the house until 1937, when it changed hands several times. Martin J. and Vurley McGuire purchased the home in 1945 and owned it for 50 years, raising eleven children there. Kenneth Shandy, the current owner, purchased the house in 1995 with his wife, Iris.

Junction City experienced its most significant building boom between 1880 and 1920. The downtown business district took on its current form during this time\(^8\) and it stands to reason that residential neighborhoods followed suit. The city included several milling operations that were closely tied to railroad development in the 1890s.\(^9\) The local and national availability of building supplies and milled lumber would have made the Queen Anne style a good match for houses in the town. The Brown house, with its 1895 construction date, was built during this busy time in Junction City. The sturdy house in the Queen Anne style is a good representation of a domestic dwelling from this place and time.

---

Sources
Abstract of Title for Lot 18 and north 1/2 of Lot 19, Block 3, Clarke's First Addition to Junction City, Kansas. (Property of owner.)

Federal Census for Geary County, Kansas, 1900.

Verbal Boundary Description
The George T. Brown house is located on Lot 18 and the south half of Lot 19 in Block 3 of W.B. Clarke’s Addition to Junction City, Kansas. The west portion of the property containing the new garage is not included in the nomination. The nomination is bounded by South Jefferson Street on the east, West Walnut Street on the south, the property line on the north and the east wall of the new garage on the west.

Boundary Justification
The boundaries include the city lots currently associated the George T. Brown house.
