National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, How to Complete the National Register of Historic Places Registration Form. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional certification comments, entries, and narrative items on continuation sheets if needed (NPS Form 10-900a).

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60.

In my opinion, the property meets does not meet the National Register Criteria. I recommend that this property be considered significant at the following level(s) of significance:

- [ ] national
- [x] statewide
- [ ] local

Applicable National Register Criteria: [x] A [ ] B [ ] C [ ] D

See file.

Great Bend Army Air Field Hangar
Name of Property

Narrative Description

Summary
The Great Bend Army Air Field (AAF) Hangar, built 1942-1943, is a utilitarian concrete, wood and metal structure designed by the Army Corps of Engineers for the maintenance and modification of aircraft during World War II. The hangar is located at the Great Bend Municipal Airport, 9047 6th Street, five miles west of Great Bend, Kansas in Section 3, Township 20 South, Range 14 West. The hangar is nominated to the National Register of Historic Places under the Multiple Property Submission (MPS), World War II-Era Aviation-Related Facilities of Kansas. The building is eligible for nomination under Criterion A in the area of Military. The building falls within the MPDF subtype, Hangar, significant as an extant structure built for the World War II Air Field.

Elaboration

Architectural Description
The tall, rectangular concrete and metal hangar faces west toward the air field's runways. The building has a north-south measurement of approximately 160 feet and an east-west measurement of approximately 168 feet, including two rear one-story sheds. The hangar sits on a concrete pad.

The hangar’s round top dominates the west (primary) façade. Concrete end-walls, each 24 feet wide, are present on the north and south ends of the façade. The hangar’s original central sliding doors are stored within the end-walls. The central portion of the façade is now clad in corrugated metal. The horizontal track for the building’s sliding doors is covered with metal that now spans the upper portion of the façade. The façade has a central door, installed in 2010, that folds horizontally to admit aircraft. The façade also has a south single entrance door. Signage includes central raised letters that spell out “PIPER”, north letters—“SALES”, “RENTAL”, “CHARTER”—and painted signage on the concrete end-walls.

The hangar’s north elevation is seven bays wide divided by six concrete buttresses. The upper portion of each bay is now covered with metal. The hangar’s round top metal roof, re-clad after a circa 2006 tornado, is visible. Viewing the building from west to east, bay one contains the solid concrete end-wall and a solid concrete bay. The east wall of the concrete end-wall has a single entrance opening and a metal ladder that rises to roof level. Bays two through six originally had upper windows. These areas are now covered with metal siding. The lower portions of bays two through six are each filled with fixed 10-pane metal windows. Bay seven contains two one-story shed extensions. The north wall of the west shed, clad in metal over asphalt, has a window and single entrance door. The north wall of the east shed is concrete block construction and contains one window. A freestanding brick chimney rises in the northeast juncture of the two sheds.

The south elevation matches the north elevation with few exceptions. The east wall of the south concrete end-wall has a sealed single entrance. The south wall of the rear west shed has a six-over-six double-hung window and a wide entrance. The south wall of the east shed has a single entrance door. A freestanding brick chimney rises in the southeast juncture of the two sheds.

The upper portion of the hangar’s round-top east (rear) elevation is clad in metal. Two east sheds fill the lower portion of the elevation. The east walls of the westernmost shed are clad in metal siding. The eastern shed, narrower than the west shed, is of concrete block construction on a poured concrete foundation. The shed is seven bays wide, consisting of a central door with a four-paned window surrounded by six casement windows.

1 Portions of the hangar were covered in metal shortly after World War II. It was originally clad in asphalt.
2 This door replaced a door installed in the 1960s.
3 According to airport staff, the eastern shed is part of the original construction, but materials indicate that it may have been added around 1950.
The hangar’s **interior** is a large open space with a concrete floor and walls of concrete or wood. Laminated wood closed Warren trusses support the arched roof.\(^4\) Historic utilitarian light fixtures hang from the wood ceiling beams. Each interior north and south bay has an upper panel filled with insulation between wood studs and wood cross timbers. The lower portions of the western bays are solid concrete. The light bays in the north and south walls have lower modern fixed windows. Above these windows, the historic wood window frames are visible, now covered with metal on the exterior. The east wall is wood, except for lower brick portions in the north and south corners. Seven vertical wood beams stretch up the wall from the floor to the rafters. The lower portion of the wall has several operable and boarded over window and door openings.\(^5\) The original east wood window frames can be seen in the upper portion of the wall. A wood ladder on the south end of the wall rises from the floor to the rafters. The north and south sections of the west wall are filled with composite panels. The central metal folding door is topped with metal panels. A modern metal truss surrounds the door.

The Great Bend hangar is located in the central portion of the Great Bend Municipal Airport, just east of the runways (Figure 1.) The hangar’s coordinates are 38.347223 latitude and -98.85328 longitude. The former Army air field includes two World War II hangars\(^6\), six brick chimneys from previous hangars and two concrete Norden bombsight storage bunkers, as well as several modern buildings.

---

\(^5\) The shed interiors behind the east wall are inaccessible. According to a 1942 building plan, the shed closest to the hangar’s interior housed an office, two restrooms, a locker room, a supply room and heater rooms in the north and south corners.

\(^6\) The airport’s remaining B-29 hangar is scheduled for demolition in 2015.

Great Bend Army Air Field Hangar
Barton County, Kansas

Narrative Statement of Significance

Summary
The Great Bend Army Air Field hangar, 9047 6th Street in Great Bend, Barton County, Kansas is nominated to the National Register of Historic Places under Criterion A, significant at the statewide level in the area of Military as part of the MPDF, “World War II-Era Aviation-Related Resources of Kansas.” The hangar is directly associated with the federal government’s wartime aviation operations from 1939 to 1945, as required by the MPDF. The building falls within the MPS subtype, Hangar, significant as an extant structure built for the World War II Air Field. The building was designed by the Army Corps of Engineers for the maintenance and modification of aircraft. The squadron hangar was constructed in 1942-1943 as part of a national defense strategy that placed air fields in south central and southwest Kansas. The well-preserved hangar is the oldest remaining resource from the World War II air field.

The impetus for this nomination came out of Section 106 mediation resulting from the proposed demolition of a National Register-eligible B-29 hangar at the Great Bend Army Air Field. The city’s proposal to demolish the hangar required a permit from the Federal Aviation Administration. The city of Great Bend, the owner of the property, agreed to nominate this hangar and the Norden Bombsight Storage Vaults to mitigate for the loss of the B-29 hangar.

Elaboration
On September 30, 1942, the Great Bend Chamber of Commerce received a message from Senator Arthur Capper: “Civil Aeronautics Administration has just allocated 1 million dollars for construction of air field at Great Bend.” This was the first official information that an air base would be built at Great Bend, although government representatives had already been exploring the area for several weeks. The chosen site was five miles west of the town in four sections in Buffalo and Liberty townships.

By the time that Kansas World War II airfields were planned, wartime building resources were becoming scarce. Construction was usually of the most immediate and least expensive type. The utilitarian buildings were functional and efficient. They were also often considered temporary and constructed of materials deemed non-critical to the war effort. The Army Corps of Engineers (Corps) oversaw all military construction. The Corps was a technical branch of the Army that specialized in construction and maintained a large and efficient field organization. The task of constructing buildings for the Air Corps was transferred to the Corps of Engineers in November 1940. The Great Bend Army Air Field reflected decisions made by the Corps to conserve materials in every way possible. Non-critical materials—wood, concrete, tarpaper—were substituted for critical materials whenever possible. Construction was limited to bare necessities.

The Great Bend base was originally activated to serve as a satellite base to the Smoky Hill Army Air Field in Salina, so early planned construction was limited. Essentials were completed first, with the first runway concrete poured in December 1942. Base construction proceeded quickly with non-essential wartime materials.

The squadron hangar was the first and sturdiest built at the air base, erected by the Patti-McDonald Construction Company, the Kansas City firm awarded the contract for most of the buildings at the air field. The building was likely completed in early 1943. An article in The Great Bend Tribune dated January 2, 1943, 1942, 1.

7 “An Air Field Here” The Great Bend Tribune, 30 September 1942, 1.
10 “Concrete Slab Poured For Army Air Base Runway” The Great Bend Tribune, 17 December 1942, 1.
stated that the base’s buildings were near completion, including the nominated hangar. In February, the newspaper reported, “In the center of the buildings at the east side of the area, the hangar is assuming shape as workmen are now putting on the roof. The huge structure has an arched roof supported by concrete pillars.” The building is labeled as “Squadron Hangar/ Modification Type” in 1942 site plans. The building’s primary purpose was to house aircraft for maintenance. The rear east shed housed an office, rest rooms, a supply room and a locker room, as well as heater rooms in the northeast and southeast corners.

The mission of the Great Bend Air Field changed in February 1943. An expansion of the field’s infrastructure was announced to prepare the base for a new assignment—training personnel for the new B-29 Very Heavy Bomber. Approximately 145 new buildings were constructed that included barracks, administration buildings and a hospital. New, larger hangars were also built, designed especially for the B-29 Superfortress. The new construction was less durable than the completed 1942 hangar. Consequently, the four hangars built in 1943 have been demolished or destroyed by fire.

The hangar played an important role in preparing flight and maintenance crews for the Pacific front. During 1944 and 1945, the primary mission of the Great Bend Air Field was to serve as a combat training base under the B-29 Superfortress project, preparing the B-29 aircraft and their crews for the Pacific front. The base served as a staging area, where air crews would practice flying the massive airships and maintenance crews would learn the mechanics of the airplanes. It was common for a new maintenance team to move to Great Bend while another group was already in training there. This allowed the new echelon to receive on-the-job training that would enable the crew to maintain the aircraft when it arrived on the base. Great Bend also became one of the first redeployment installations in the country. During early 1945, European theater echelons were trained in B-29 maintenance before departing for the Pacific. Although the hangar was too small to hold a B-29 airplane, the building would have provided storage for other airplanes and space for maintenance crews.

Activity at the Great Bend Air Field decreased dramatically during mid-1945. No new trainees were assigned to the base. During the summer of 1945, the base’s primary mission was to discharge or transfer qualified soldiers. The base was officially placed on standby on December 31, 1945 and buildings were deactivated. The field was declared surplus in June 1946 and the City of Great Bend was granted a permit to acquire it. The air field was deeded to City of Great Bend via three Quitclaim Deeds in December 1947, October 1948 and June 1949. The building has served as the main hangar for the Great Bend Municipal Airport since then. It is currently leased for the storage of small airplanes at the airport.

The Great Bend Army Airfield hangar was an integral component of World War II airfield construction in Kansas. The building housed aircraft, served as instructional space for skilled maintenance crews and readied equipment for the Pacific front. The hangar retains integrity of design, feeling and association. The rarity of

10. Geographical Data

Acreage of Property: Less than one acre

Provide latitude/longitude coordinates OR UTM coordinates.
(Place additional coordinates on a continuation page.)

Latitude/Longitude Coordinates
Datum if other than WGS84:__________
(enter coordinates to 6 decimal places)

1  38.347223  -98.853280  3
   Latitude:  Longitude:

2
   Latitude:  Longitude:

Verbal Boundary Description (describe the boundaries of the property)
The nominated property straddles a section line – it is located in the NW ¼ of the NE ¼ of Section 3, Township 20S, Range 14W and the SW ¼ of the SE ¼ of Section 34, Township 19S, Range 14W, near the northwest corner of C and 6th streets at the former Great Bend Army Air Field. The boundary is defined by the exterior walls of the hangar that extend to include the freestanding chimneys on the northeast and southeast corners.

Boundary Justification (explain why the boundaries were selected)
The nominated property includes only the hangar building as defined by the latitude and longitude coordinates. This nomination does not include any authority property beyond the hangar.
