National Register of Historic Places
Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A) Complete each item by marking “x” in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter “N/A” for “not applicable.” For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-9000a). Use a typewriter, word processor, or computer, to complete all items.

8. Statement of Significance

Applicable National Register Criteria
(Mark "X" in one or more boxes for the criteria qualifying the property for National Register)

☐ A Property is associated with events that have made a significant contribution to the broad patterns of our history.

☐ B Property is associated with the lives of persons significant in our past.

☒ C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.

☐ D Property has yielded, or likely to yield, information important in prehistory or history.

Criteria Considerations
(Mark "x" in all the boxes that apply.)

Property is:

☐ A owned by a religious institution or used for religious purposes.

☒ B removed from its original location.

☐ C a birthplace or grave.

☐ D a cemetery.

☐ E a reconstructed building, object, or structure.

☐ F a commemorative property.

☐ G less than 50 years of age or achieved significance within the past 50 years

National Register of Historic Places
Continuation Sheet

Washington County Kingpost Bridge
Washington County, Kansas

Section number  7     Page  1

RELOCATION APPROVAL

Erected circa 1900, the Washington County Kingpost Bridge is a single span, King Post truss 22 feet long and 14.5 feet wide. Listed in the National Register of Historic Places on 1/04/1990, the bridge is located in Lincoln Township, 4.5 miles southeast of Barnes on All American Road and .3 miles east on 5th Road. The road is no longer maintained and the site is overgrown with trees, brush, and other vegetation. When the wood deck deteriorated, the bridge was bypassed by a new section of road with a culvert to the west. Because of maintenance concerns, the county commissioners offered the bridge to the City of Barnes, and the city council agreed to accept the bridge. The proposed new location is over an existing drainage ditch on city property west and adjacent to the “Welcome to Barnes” sign that is on the southwest corner of the intersection of Kansas Highways 9 and 148 and Center Street.

Relocation Plan

The Washington County Kingpost Bridge is being moved because of a concern for its well being. The road upon which it sits is no longer maintained or open to vehicle or pedestrian traffic. Washington County owns the bridge and is committed to saving the bridge from further neglect by relocating it. The decision to move (rather than demolish) the bridge came, in part, because the bridge is intact and in fair condition. The loss of integrity will be almost exclusively to the environs. While efforts are being made to site the bridge nearby and orient it in a similar environment, it will lose its original surroundings.

The Washington County Public Works Department will be preparing and moving the Kingpost Bridge to its new location in nearby Barnes. The city council agreed to accept the bridge and will place it over an existing natural drainage ditch located west and adjacent to the “Welcome to Barnes” sign that is on the southwest corner of the intersection of Kansas Highways 9 and 148 and Center Street. The bridge will be used for pedestrian traffic.

The vegetation and gravel roadway will be cleared from the bridge to reveal any remaining wooden decking. The wooden decking will be removed – and salvaged if possible – to reveal the iron and steel bridge structure. The metal bridge structure will be loosened from the roadway footings using tools and chisels, but will remain intact as a single piece. Meanwhile, the City of Barnes will prepare the new location for placement with concrete footings and pedestrian-traffic approaches. A crane will then remove the structure from its footings and place it on a flatbed truck for transportation to its new location. The iron and steel structure will then be lifted into place by the crane on its new concrete base and secured with concrete foundation pads. The wooden deck will be reused where possible and any replacement pieces will be fitted to match the existing decking. Following the Secretary of the Interior’s
Standards, repairs after relocation will be made as needed to the metal trusses and supports by the City of Barnes. Efforts will be taken throughout the project to minimize damage and preserve the materials.

The City of Barnes will assume perpetual maintenance of the bridge at its new location. The City will apply for matching funds and/or grants to help in the restoration process following approval of the relocation. Signage explaining the bridge's historic significance is planned. Washington County and the City of Barnes wish to save the bridge and encourage visitors to stop and see the bridge.
The proposed relocation of the Washington County Kingpost Bridge will not affect the integrity or the significance of the structure, which was nominated under Criterion C for its engineering significance as one of only eight King Post bridges still extant in Kansas. As part of the move, the Washington County Kingpost Bridge will be restored, and the new location next to a state highway will provide more people with the opportunity to view the rare structure. In its current location, the bridge is not accessible and there is no signage acknowledging its existence or historical significance.

ARCHEOLOGICAL REVIEW OF PROPOSED NEW SITE

The Kansas State Historic Preservation Office has reviewed its cultural resources files for the area proposed for relocation of the Washington County Kingpost Bridge in accordance with 36 CFR 800. The proposed new location is situated at the western edge of Barnes in eastern Washington County. It lies along an intermittent tributary of Camp Creek in an area that possesses low potential for archeological sites. The proposed new bridge location along an existing railroad grade possesses low potential for archeological sites. The proposed bridge relocation project should therefore have no effect on properties listed in the National Register of Historic Places or otherwise identified in our files. This office has no objection to the implementation of the project.

roof
other Metal: Wrought Iron or Steel

Describe present and historic physical appearance.

The Washington County King Post truss was erected ca. 1900 and is a riveted pony truss. The single span is 22 feet long and 14 1/2 feet wide. The wooden deck rises 12 feet above the creek bed. The bridge is located at a slight bend of the road and sits on a slight northwest-southeast alignment. This is often true with early bridges as this alignment allowed a right angle approach to the stream and a saving of money in both bridge length and amount of fill required.

The members of a truss bridge are designated either as chord members or web members. Chord members are those mainly defining the outlines of the structure and they are termed lower or upper chord members depending on whether they are found at the bottom or the top of the structure. Members between the chords are web members. They are called posts or ties if they sustain compression or tension respectively.

In the King Post truss such as the Washington County bridge, the end posts and top chord merge to form two sides, and the lower chord completes the triangle. The end post and top chord sides are in compression while the lower chord side is in tension. The Washington county bridge fabricated with the use of angle stock with riveted connections. The top chords, king post, and diagonals are made up of two angle plates riveted together to form a beam. The bottom chord is single. One floor beam is attached to the king post and the sway brace. This in turn supports an I beam running the length of the panel. The wood decking is laid diagonally on top of these I beams. The bridge has been abandoned and traffic is no longer allowed to pass over it. It is visible from the new alignment and has not been altered.
The King Post is one of the oldest truss designs, serving well in many medieval buildings. As is evident they served as well as bridges into the 20th century. Its simplicity also establishes its limit. As the length increases so must the height, at the same ratio. It is therefore only practical in short spans.

In Kansas eight King Posts still exist. Although the longest span is 56 feet, the average is closer to 40 feet. Six of the remaining bridges are located in Washington and Phillips counties. Single representatives are located in Brown and Labette counties. This would suggest that the design was more popular in the northeast portion of the state.

No actual construction history of the Washington County King Post has presently been located. Such structures were generally quite inexpensive and received little public notice. It was selected to be nominated because its all riveted construction suggests that it was a late example of the design, retains an outstanding degree of its integrity, and is a good representative of the class.

The Kansas Department of Transportation (KDOT) carried out a statewide inventory of historic bridges between 1980 and 1983. The bridges to be included were identified through computer printouts developed by KDOT, from information supplied by the counties (since almost all of the historic bridges were located on secondary rather than the primary road system), and by direct observation by field personnel. All bridges were inspected by KDOT personnel to verify the data on file. That information was jointly evaluated by representatives of KDOT, Kansas State Historical Society, and the State Historic Preservation Officer.

Each structure was evaluated using a points rating system adapted from the points evaluation rating developed by the Ohio Department of
Transportation and Ohio Historic Preservation Office. Consideration was given to areas such as age, builder, number of spans, length, special features, history, integrity, surviving numbers, and preservation potential.

In many instances there is little information about individual structures. Often bridge plaques which may have contained information have been removed, or the county's records are not complete or have been destroyed. Due to the large numbers of similar structures there is often little to choose from in differentiating among individual bridges other than condition and the likelihood of preservation.

The purpose of the KDOT study and subsequent evaluation was to identify a representative selection of bridges of each class. Through this approach KDOT and KSHS hope to preserve for posterity some examples of each type.
9. Major Bibliographical References

10. Geographical Data

Acreage of property: less than one acre

UTM References
A [1 A | 6 1 8, 3 8, 4, 0] Zone Easting Northing
C [ ] [ ] [ ]

B [ ] [ ] [ ]
D [ ] [ ] [ ]

Verbal Boundary Description
The nominated property is located on the NW 1/4, NW 1/4, NE 1/4, NW 1/4, section 10, township 5 south, range 5 east, on a tract measuring 22' x 14 1/2' whose northwest corner is represented by the northwest corner of the bridge. Beginning at the northwest corner the boundary proceeds 22' southeast, 14 1/2' southwest, 22' northwest and 14 1/2' northeast to the point of beginning.

Boundary Justification
The boundary includes only that area that is historically associated with the nominated property.
