6. REPRESENTATION IN EXISTING SURVEYS

TITLE OF SURVEY:
Survey of Historic Sites and Structures in Kansas

DATE OF SURVEY:
1957

DEPOSITORY FOR SURVEY RECORDS:
Kansas State Historical Society

STREET AND NUMBER:
120 West Tenth street

CITY OR TOWN:
Topeka

STATE:
Kansas

CODE:
66612

7. ENTRY DATE

FOR NPS USE ONLY

STATE:
Kansas

COUNTY:
Wilson

ENTRY DATE:

FOR NPS USE ONLY
The site of the Norman No. 1 oil well is today a Neodesha city park. A reconstruction of the original derrick was made from California redwood and erected over the well site in 1961. (The original derrick was not of redwood, but it was used because of its durability.) The derrick stands 67 feet tall and each of the four sides measures 21 feet at the base and tapers to less than one-third that amount at the top. A small shed and other accoutrements of the oil drilling activity have been placed in the proper location. A fence surrounds the well site and separates it from a museum and information center built on the grounds in 1970.
The Norman No. 1, which was located in the garden of T. J. Norman, a Neodesha blacksmith, was the first commercially successful well of the Mid-Continent oil field, the nation's largest, which spreads over Kansas, Oklahoma, and Texas.

Oil had been known in Kansas for many years; travelers on the Santa Fe trail knew of oil seepages which they used for lubricating their wagons. Following the news of Edwin Drake’s successful drilling at Titusville, Penna., in 1859, interest was stirred in eastern Kansas where oil traces had been found. Several wells were dug with slight success before the Civil War curtailed such activities. After the war the search for oil and gas continued, particularly in southeastern Kansas.

One of the key figures in oil and gas exploration in southeastern Kansas was William Mills, who left Pennsylvania in 1884 for Miami county, Kan., where he successfully completed a number of gas wells. Several Neodesha businessmen decided their community in Wilson county should have gas for fuel, and they promised Mills leases on 5,000 acres if he would drill a well. They were not averse to the development of an oil industry in case he should find oil instead of gas, and a clause in the leases stated that if oil was struck, it would be refined in Neodesha. The leased properties included the four-acre garden patch of T. J. Norman along the banks of the Verdigris on the east edge of town. The firm of A. P. McBride and C. L. Bloom of Independence, Kan., contracted to drill Mills’ well.

On November 28, 1892, the drilling rig struck oil at 832 feet. Mills’ diary entry for that date reads: "Well commenced flowing at noon. I stayed with it all day and night. Gathered 60 gallons of oil ..." He believed that the oil was of marketable quality, but he lacked the large sums of money needed to go into large scale production. Therefore the discovery was kept secret, the machinery was taken down and the well capped the next day, and Mills went East to seek capital. His efforts were unsuccessful until he talked to the firm of John Guffey and James Galey in Pittsburg. These men were well-known wildcatters famous for their development of eastern oil fields. Galey made a trip to Kansas and decided that the venture was worthwhile.
8. They took over Mills' project, offering him one-fourth interest, and soon had leased thousands of acres in Wilson and adjoining counties. (Some estimates say as much as one million acres were leased.) Several drilling operations took place but no gushers were found. Then on October 4, 1893, after it had been left idle for almost a year, the Norman well was shot with 30 quarts of nitroglycerin. The assembled crowd of onlookers saw a large column of oil and water rise high above the derrick. The first pumping yielded 371 barrels of oil. The well produced as much as two barrels of oil an hour and 18 to 24 barrels a day with continuous pumping. The Norman No. 1 was the first producing well in what became known as the Mid-Continent field. It was the first major discovery of oil in the nation since the Titusville find in 1859.

Other successful wells were drilled, but Guffey and Galey could not market their Kansas oil without paying prohibitive transportation charges. (The rates were controlled by Eastern interests who had no desire to see the Kansas oil fields developed.) Consequently they sold out in 1895 at a considerable loss to the Forest Oil Co., a subsidiary of Standard Oil. Before the turn of the century Standard Oil had erected a refinery at Neodesha.

The Norman No. 1 continued to pump for 24 years until 1917. At that time its yield was down to half a barrel a day and the pipe was pulled and the well abandoned. The site was forgotten until the celebration of the 50th anniversary of the discovery of oil in Neodesha stirred interest in marking the site responsible for much of the growth and prosperity of the city.

In 1961 a 67-foot reconstruction of the original derrick was erected on the site of the well. An information and museum building was placed at the city-owned site in 1970.

The Norman No. 1 oil well site is an important landmark to the industrial growth of Kansas. The well is not significant for the amount of oil it produced but rather for what its successful completion led to. As the discovery well of the Mid-Continent field, whose oil has been so important to the nation's prosperity, the Norman No. 1 is a historic site worthy of National Register listing.

12. STATE LIASON OFFICER CERTIFICATION

As the designated State Liaison Officer for the National Historic Preservation Act of 1966 (Public Law 89-665), I hereby nominate this property for inclusion in the National Register and certify that it has been evaluated according to the criteria and procedures set forth by the National Park Service. The recommended level of significance of this nomination is:

National [x] State [ ] Local [ ]

Name: Nyle H. Miller
Title: Executive Director, Kansas State Historical Society
Date: December 4, 1973

I hereby certify that this property is included in the National Register.

Director, Office of Archeology and Historic Preservation

ATTEST:

Keeper of The National Register

Date
